PROFESSIONAL SUMMARY

Detail-oriented B.Sc. Data Science student (CGPA 8+) at SIES College, Mumbai, with hands-on experience in Python, SQL, and data visualisation. Building a 9-project data analysis portfolio spanning sales analytics, public health data, HR analytics, and customer behaviour. Passionate about turning raw data into clear business insights and actively seeking a Data Analyst internship.

EDUCATION

B.Sc. in Data Science — SIES College of Arts, Science & Commerce, Sion West Expected: 2027

SIES COLLEGE · Overall CGPA: 8+ (Sem 4: 8.59) — current

Relevant Coursework: Statistics & Probability · Linear Algebra · DBMS · Machine Learning Fundamentals · Data Structures
HSC (Science): 73.17% · SSC: 78.60%

TECHNICAL SKILLS

Languages Python · SQL · R · SAS

Libraries Pandas · NumPy · Matplotlib · Seaborn

Tools Excel · Power BI · Tableau · Google Colab · Git · GitHub · Jupyter Notebook

Concepts EDA · Data Cleaning · Data Visualisation · Dashboard Design · Statistical Analysis · Business Intelligence

Databases MySQL · DBMS Fundamentals

CERTIFICATIONS

- Python — Kaggle (Certificate)
- Pandas — Kaggle (Certificate)
- Data Cleaning — Kaggle (Certificate)
- Data Visualisation — Kaggle (Certificate)
- Data Analytics Job Simulation — Deloitte (via Forage)

PROJECTS

1. Superstore Sales Analysis

Python · Pandas · Matplotlib · Seaborn · Google Colab

- Analysed 10,000+ retail transactions to identify which products, regions, and categories were most and least profitable for the business.
- Found that Technology drove 36% of total profit while Tables & Bookcases were consistently loss-making — giving management clear, actionable targets.
- Presented findings through charts and visual summaries that any non-technical stakeholder could read and act on.

GitHub: https://github.com/RABI-17/superstore_sales_analysis

2. COVID-19 Global Data Tracker

Python · Pandas · Matplotlib · Seaborn · NumPy

- Built a visual tracker covering COVID-19 cases, deaths, and vaccination progress across 190+ countries over 2+ years.
- Identified which countries recovered fastest and how vaccination speed impacted death rates — turning large datasets into a clear, easy-to-follow story.
- Designed all charts to be readable by non-technical audiences, focusing on ‘what happened and why it matters’.

GitHub: <https://github.com/RABI-17/covid19-global-analysis>

3. Netflix Content Analysis

Python · Pandas · Matplotlib · Seaborn · Google Colab

- Explored Netflix's full catalogue of 8,000+ titles to understand content strategy, dominant genres, and how the platform's output has shifted over time.
- Found that 69% of content is Movies, Drama is the #1 genre, and Netflix tripled original productions between 2016–2019 — insights relevant to content and marketing teams.
- Delivered a clean visual report with plain-English summaries alongside every chart for easy stakeholder reading.

GitHub: <https://github.com/RABI-17/netflix-content-analysis>

4. E-Commerce Customer Behaviour Dashboard *Python · Pandas · SQL · Plotly · Tableau · Dashboard Design*

- Analysed 541,909 e-commerce transactions using RFM (Recency, Frequency, Monetary) analysis to segment customers into Champions, Loyal, At-Risk and Lost groups.
- Built a live interactive Tableau dashboard allowing non-technical teams to filter and explore customer behaviour by region, product category, and time period.
- Translated complex customer data into a visual story that helps marketing and sales teams make faster, evidence-based decisions.

GitHub: <https://github.com/RABI-17/ecommerce-customer-behaviour>

5. HR Analytics: Employee Attrition Analysis *Python · SQL · Pandas · Seaborn · Tableau · Power BI*

- Analysed IBM HR dataset (1,470 employees, 35 features) using advanced SQL (window functions, CTEs, CASE WHEN) and Python to identify key drivers of employee attrition.
- Built a composite risk model in SQL that identifies employees with ~80% attrition likelihood using four risk flags — overtime, low satisfaction, low salary, and short tenure.
- Delivered dual dashboards in Tableau and Power BI with interactive department filters, KPI cards, and business recommendations for HR leadership.

GitHub: <https://github.com/RABI-17/hr-analytics-attrition>

COURSES & CONTINUOUS LEARNING

- Data Science with Python — Code With Harry (In Progress · currently at ML section)
- Python & SQL Practice — HackerRank (Active daily practice)
- Self-directed learning: Kaggle datasets, GitHub open-source projects, real-world data analytics case studies

KEY STRENGTHS & ACHIEVEMENTS

- Consistent academic performer — maintained 8+ CGPA across all semesters of B.Sc. Data Science
- 5 industry certifications earned: 4 Kaggle courses + Deloitte Data Analytics Job Simulation (Forage)
- Building a structured 9-project portfolio (Beginner → Intermediate → Professional) targeting FAANG-level internships
- Advanced SQL skills: window functions (RANK OVER PARTITION BY), CTEs, CASE WHEN — beyond standard junior-level competency
- Proactive self-learner — simultaneously progressing through industry courses while executing hands-on projects
- Strong foundation in Statistics, Probability & Linear Algebra — core competencies for data and ML roles

Portfolio & project notebooks available on GitHub · Open to Data Analyst / Business Analyst Internships
